# atreya.ai

## Making Ayurveda measurable.

AI-powered multimodal health screening
and personalized Ayurvedic intervention.

Healing Home Wellness

# We didn’t start by building AI

The AI journey emerged from a real operating challenge — not arbitrary adoption.

### D2C Ayurveda Products

Building high-quality, effective Ayurveda products for modern lives.

### Strong market traction

Quality and efficacy drove strong customer trust and momentum.

### Growth started stagnating

The early momentum hit a plateau despite best efforts.

### A deeper problem emerged

The real challenge was integration and personalization.

Quality and efficacy drove post-COVID traction. The plateau revealed the harder challenge: **integration and personalization.**

# Our first pilot taught us what was missing.

Early learning through a CSR pilot in two old-age homes.

## 01 Pilot

Early learning through a CSR pilot in two old-age homes.

## 02 Observation

Participants followed Ayurvedic diet, yoga and medicine routines; weekly self-reported progress and sustained engagement informed the next step.

## 03 Learning

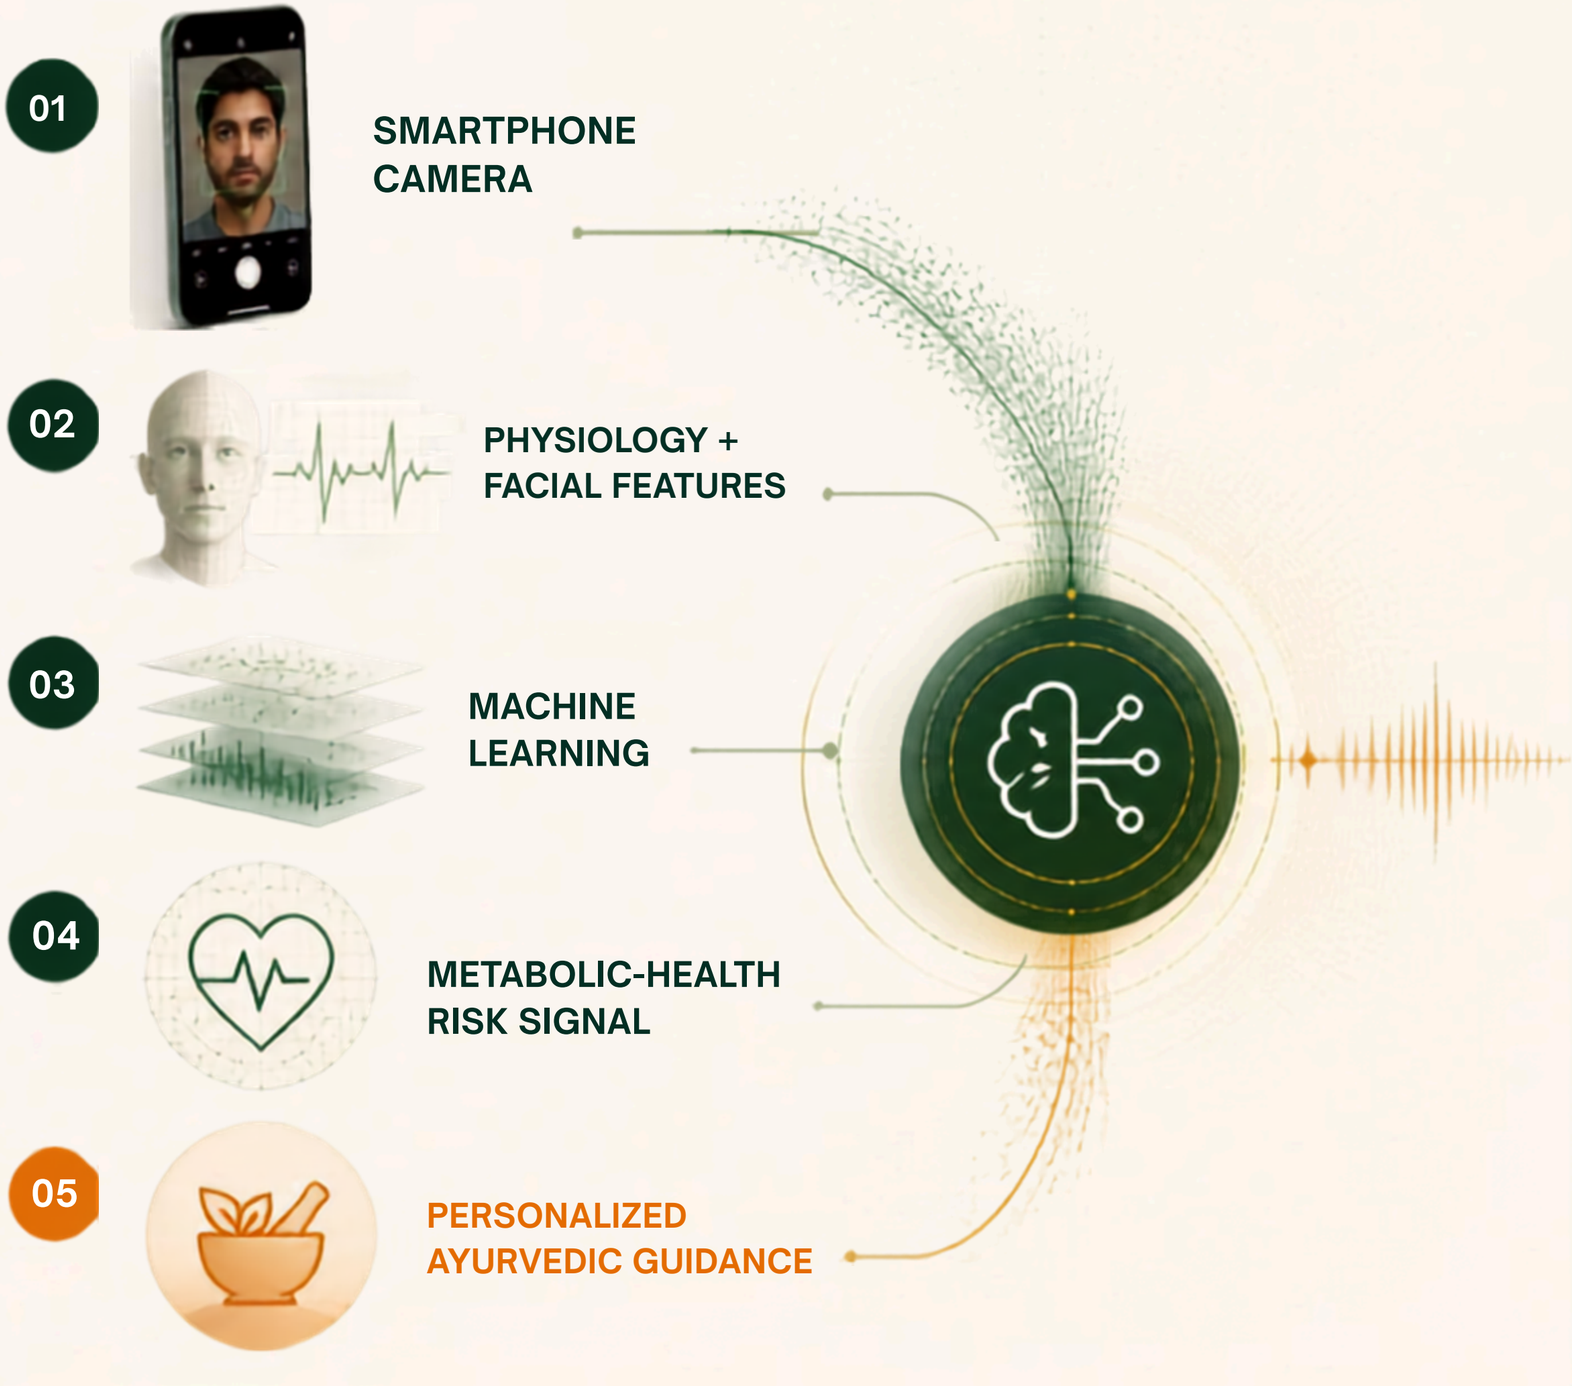

**Subjective surveys and basic sensors were insufficient to capture clinical joint health.**

**Pilot** → **Limitation Identified** → **Technology Pivot**

# So we changed the question.

**What if we could measure useful signals directly — instead of asking people to describe everything?**

# Meet atreya.ai

An AI-powered multimodal health-screening platform — designed for guidance, not diagnosis.

01

MEASURE

Facial biomarkers + smartphone physiological signals

02

UNDERSTAND

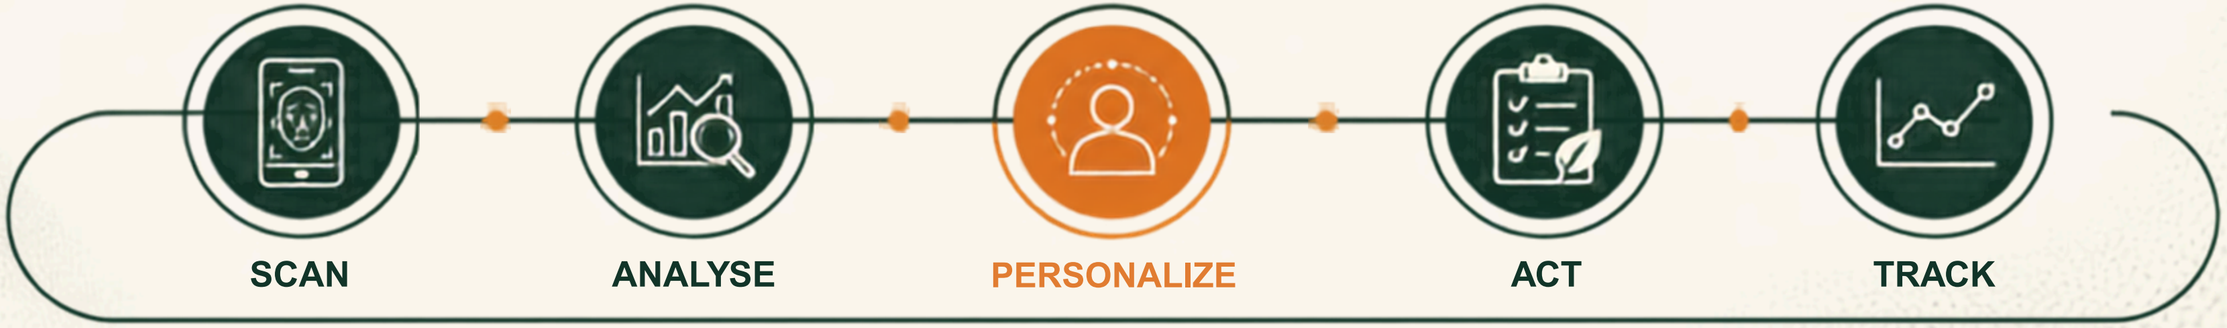

ML combines structured health information

03

PERSONALIZE

AI + Ayurvedic expertise guide interventions

# A smartphone camera can become a non-contact physiological sensor.

Remote photoplethysmography (rPPG) analyzes tiny changes in reflected facial light to estimate pulse-related signals without contact.

rPPG estimates pulse-related signals from subtle light changes captured by a camera — without claiming clinical-grade accuracy.

## 1 CAPTURE

Smartphone camera records a short face video.

## 2 EXTRACT

Subtle color changes are isolated into a pulse-related waveform.

Pulse-related signal (rPPG)

## 3 COMBINE

The signal is interpreted alongside facial features and structured health information.

FACIAL FEATURES

rPPG SIGNAL

STRUCTURED HEALTH INFO

**rPPG** + **FACIAL FEATURES** + **STRUCTURED HEALTH INFORMATION** = **MULTIMODAL HEALTH REPRESENTATION**

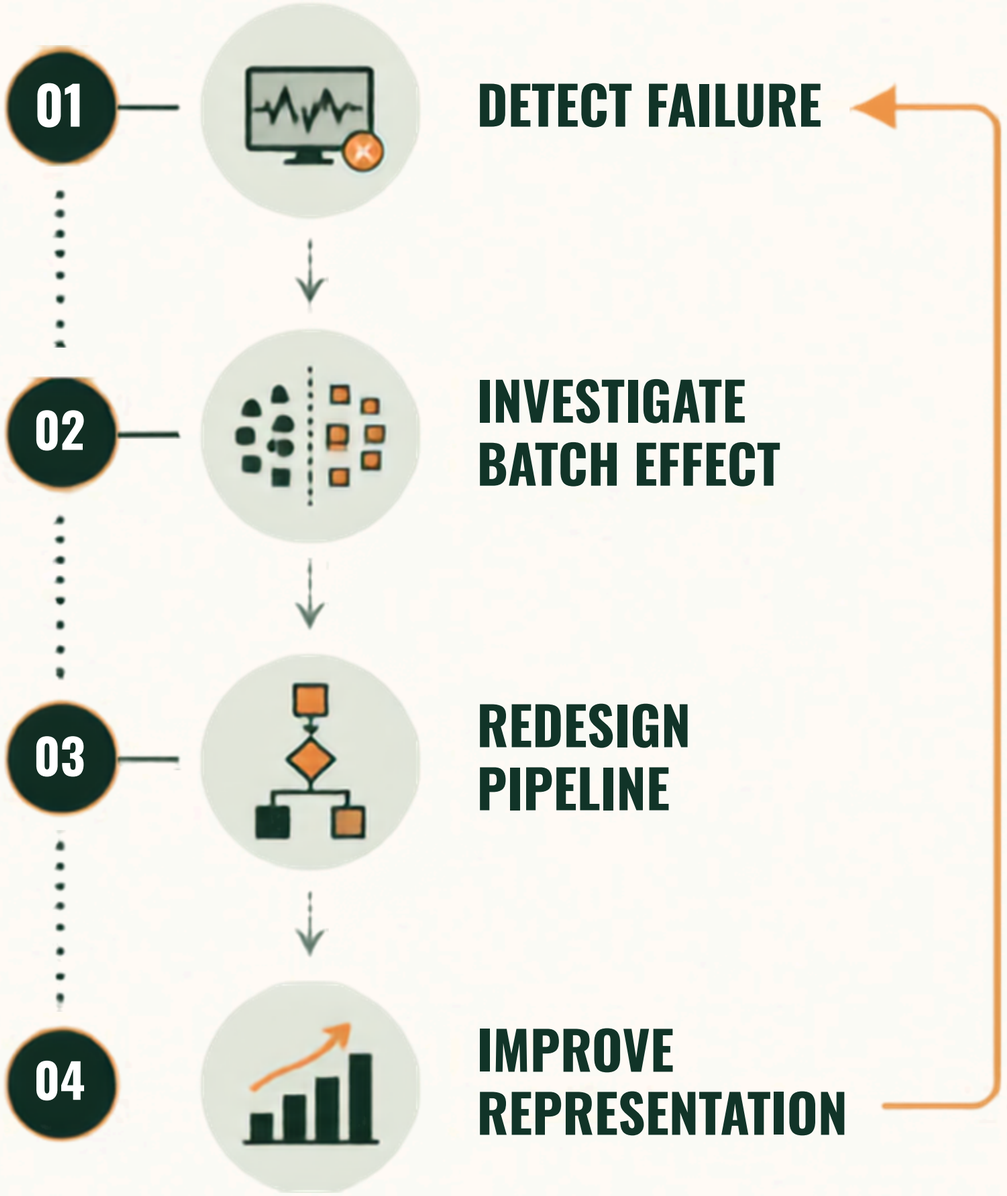

Atreya investigates whether these measurable signals can support metabolic-health risk stratification and personalized Ayurvedic guidance. **This is investigative and not a diagnosis.**

# We tested the model — and found it learning the wrong thing.

> *“High apparent performance is meaningless if the model learns acquisition artifacts instead of biological signal.”*

## MODEL PERFORMANCE — GENERALIZATION

# Better representation improved experimental classification.

## BAYESIAN · PRE-TRAINING

Accuracy **61.8%** · Sensitivity **60%**

Specificity **80%** · F1 ≈ **74.1%**

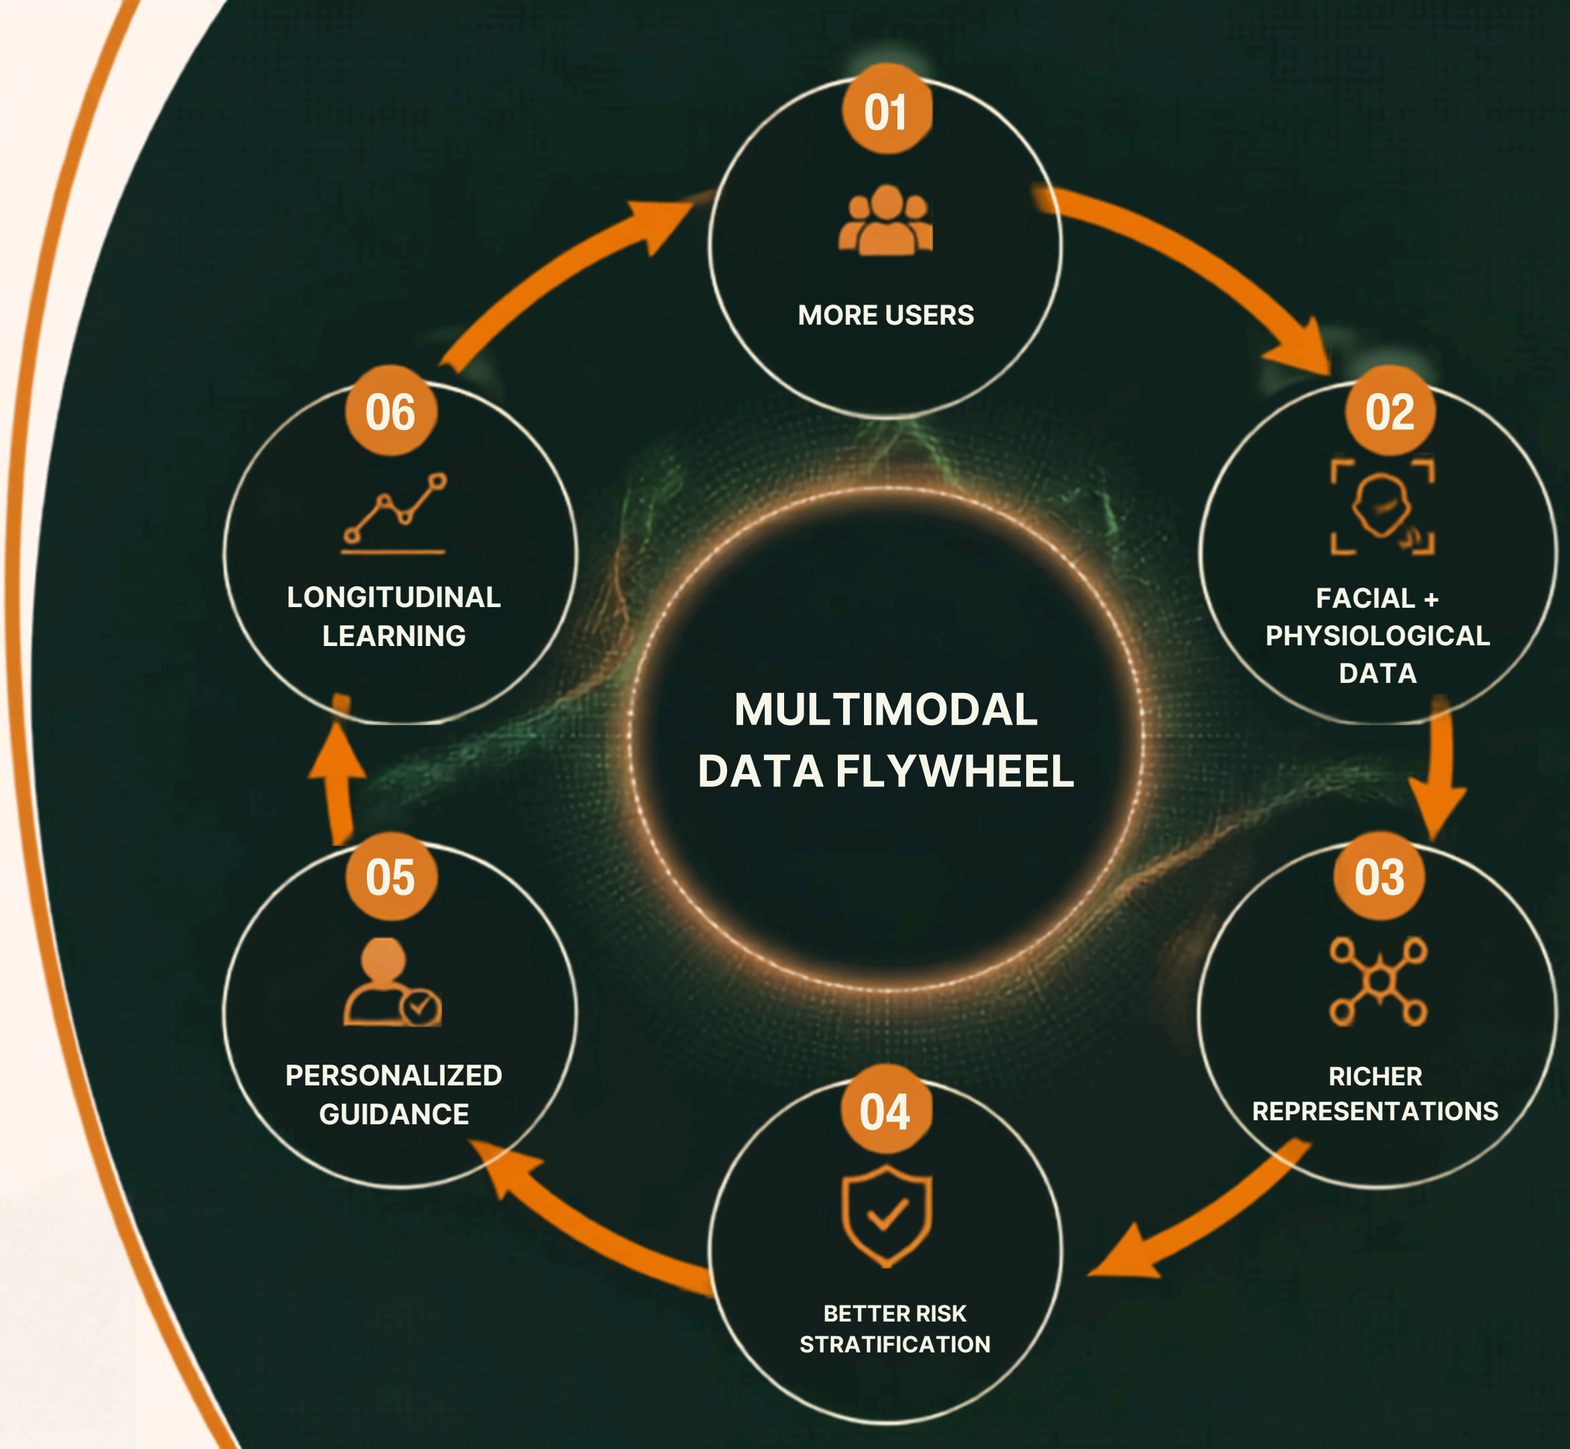

## XGBOOST · POST-TRAINING

Accuracy ≈ **83.6%** · Sensitivity ≈ **86%**

Specificity ≈ **60%** · F1 ≈ **90.5%**

# The moat is not the app. It is the data and representation.

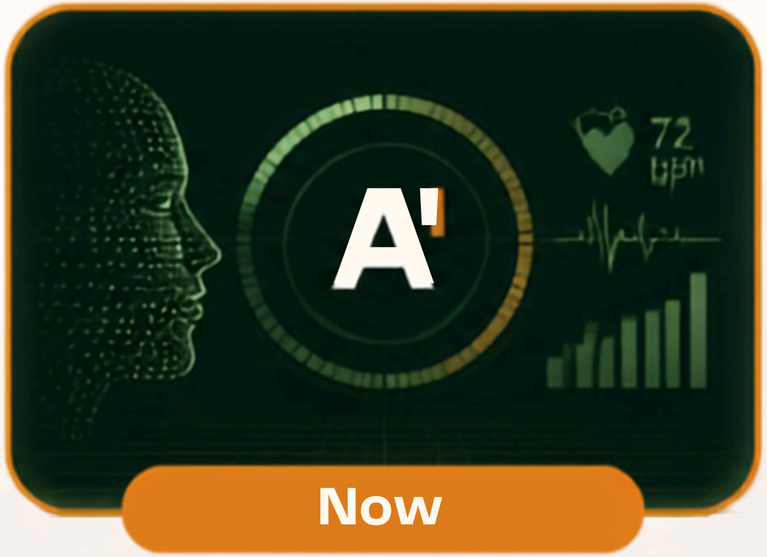

# We are not building another Ayurveda app.

**Then**

**D2C Ayurveda Products**

**Now**

**AI-assisted metabolic-health screening**

**Next**

**Personalized preventive health platform**

**AI x Preventive Health x Digital Health x Personalization x Ayurveda**

For people seeking accessible, personalized metabolic-health insights.

# The team building measurable Ayurveda

## Dr Ruchi Agarwal

**Founder & CEO**

*Dr Agarwal brings 14+ years of experience across strategic management, healthcare consulting, risk governance, research, and executive education.*

## Dr Nikhil Agarwal

**Co-Founder**

*Dr Agarwal brings extensive expertise in innovation, entrepreneurship, technology commercialisation, and institutional-industry collaboration.*

## Dr Nandagopal Gopinathan

**Advisor**

*A healthcare and digital health leader with 20+ years of experience spanning MedTech, deep technology, product strategy, and commercialisation across India and USA.*

INVESTMENT ASK

# The raise to make Ayurveda measurable

Capital to move Atreya.ai from experimental AI toward a validated, scalable health platform.

**Raise**

**₹2.5 Cr**

**Equity**

**10% equity**

**Valuation**

**₹25 Cr valuation**

# Thank You

Let's make Ayurveda measurable.
